

HOME SERVICE ON DEMAND

Introduction:-

- With this platform we are trying to provide such services which are used in our everyday life.
- Examples: Plumbing, gas stove repairing, RO servicing, electrical appliance repairing, etc.
- These services are very hard to find especially when you are unfamiliar with the location.

Present and Proposed Systems:-

Present System

- Presently there are some websites available which provide the home services on demand.
- But these systems are not user-friendly and are not efficient as it shows all the service providers present in your city and not particularly your area.

Proposed System

- We provide a new and efficient system which is user-friendly and users can find their service with just one click.
- Here, we have based our location tracking system which tracks the nearby 5km area and shows the service available.

HOME SERVICE ON DEMAND
